

**"METHOD OF FORMING FILM FOR THE CONSTRUCTION OF BAGS FOR  
VACUUM PACKAGING OF PRODUCTS"**

**ABSTRACT**

5           The invention concerns a method of forming a film for the construction  
of bags for vacuum packing of products which comprises: depositing an  
additional resin film on the internal face of an initial film, running the initial film  
complete with the added film between a smooth feed roller and a shaping  
roller having a multiplicity of alternating peripheral impressions and ridges,  
10   and bringing the additional film in close contact with the shaping roller so as to  
have portions of additional resin flow into the impressions of the shaping roller  
to form the ridges defining the ducts.

The invention also concerns the film realised with the method and the  
bags constructed using such film.
